

Claude Mastery for Business Productivity and Automation

DURATION

2 full days

8:30am to 5:30pm, both days

STRUCTURE

11 modules

Theory + practical

TECHNICAL LEVEL

No coding

Laptops required

COURSE OVERVIEW

Two days that take a team from cautious to fluent

Built for whole companies starting from zero, not for technical teams. No coding and no previous AI experience needed. Participants work with **Claude** on their own laptops from the first hour, on real tasks from their own week, and every module is taught and then practised.

WHAT IS INCLUDED

Claude Pro, free for the workshop

Certificate of recognition, digital and physical

WHO SHOULD ATTEND

Suitable for anyone in the company, regardless of position or experience

HR

Finance

Sales

Operations

Marketing

Customer service

Procurement

Management

LEARNING OUTCOMES

What your team can do after the two days

KEY CAPABILITIES OF CLAUDE

Read

Write

Think

Analyse

Automate

Build

⚡ Agentic AI

Claude does the work itself instead of telling you how to do it.

🔄 Automation

The work you repeat every week runs on its own, whether anyone remembers or not.

<> Vibe-coding

You describe the tool you need in English and Claude builds it for you.

📖 Knowledge base

Your policies, templates and past work, in one place Claude can read.

🔌 MCP connections

Claude connects to Google Workspace, Microsoft Teams & more to work on your files.

★ And many more

Skills, Artifacts, Cowork. Eleven modules, every one of them hands-on.

Delivered by international AI developers

The programme is designed and delivered by the two founding directors of Blueprint AI Training, both practising AI engineers who built and deployed AI systems within large organisations before establishing the firm.

Tey Jian Han

CO-FOUNDER & DIRECTOR

Jian Han is a Co-founder and Director of Blueprint AI Training, where he leads curriculum design and delivers the Claude Mastery programme. His work focuses on applied generative AI for business functions, including AI agents and responsible deployment.

Before founding Blueprint, he was a Senior Associate in EY's Technology Consulting practice (AI and Data), where he designed and built AI agents for enterprise clients. His experience also includes Tenaga Nasional Berhad.

EDUCATION

MSc Business Analytics

Imperial College London · [Dean's List, Distinction](#)

BSc Computer Science with Management

King's College London · [First Class Honours](#)

EXPERIENCE

AREAS OF EXPERTISE

AI and software development · Data analysis and data science · Machine learning and generative AI

Daniel Chua

CO-FOUNDER & DIRECTOR

Daniel is a Co-founder and Director of Blueprint AI Training, where he leads hands-on delivery and the data analysis, automation and no-code modules. He advises organisations on adopting AI in day-to-day operations, turning recurring analysis and reporting into tools that staff use.

His previous roles include Data Analyst at **MoneyLion**, a US-listed fintech, where he built machine learning models for revenue and retention; AI Developer at a global cryptocurrency exchange, building internal data and reporting agents; and Growth Marketer at CoinGecko. Since 2019 he has also run a digital marketing agency.

EDUCATION

Master's degree in Business Analytics

Sunway University, CGPA 3.91 · [Sunway Scholastic Award \(2025\)](#)

Bachelor's degree in Computer Science

Xiamen University, CGPA 3.87 · [Chinese Ambassador Award \(2020\)](#), [SFS High Achievers Award \(2018\)](#)

EXPERIENCE

MoneyLion

coingecko

CoinW

AREAS OF EXPERTISE

AI and software development · Data analysis and data science · Machine learning and generative AI

The two days at a glance

Both days run 8:30am to 5:30pm with lunch at 12:30pm, and each carries six and a half hours of modules. Block height is time, and colour is the kind of module: awareness, hands-on, or project-based.

Course Outline (Day 1)

TIME	DAY 1 AGENDA	
8:30 am	Registration and networking	30 MIN
9:00 am	Module 1 Introduction to AI and Claude for productivity > Where generative AI helps a business, and the basics of models, tokens and context > The Claude 6 Main Pillars: Read, Write, Analyse, Automate, Think, Build > Hands-on: a guided tour of Claude, exploring all its key features as an introduction	75 MIN
10:15 am	Morning tea break	15 MIN
10:30 am	Module 2 Effective AI communication > The 5 Ingredients of a clear prompt: Role, Context, Task, Format, Constraint > Effective iteration: how to refine a response instead of starting over > Understand context windows, and how to avoid context rot in long conversations > Explore output formats and Artifacts: tables, documents, slides and exports > Hands-on: a first real task in Claude, from early mistakes to a proposal exported in several formats	60 MIN
11:30 am	Module 3 Responsible AI use > AI hallucinations: why models invent facts, figures and sources, and how to spot them > Human in the loop: what AI can draft, and what a person must still check and own > Spotting legitimate tools versus data-harvesting ones > How free and paid tiers handle your data, and what never goes into a chat	60 MIN
12:30 pm	Lunch	60 MIN
1:30 pm	Module 4 Claude Skills (Part 1): Introduction and Setup > What a Skill is: a procedure you explain once, which Claude then follows every time > Why it is needed: the same standard every time, no re-briefing, shared across a team > Where to find Skills: the ready-made library inside Claude, and how to add your own > How to use one: calling a Skill in a conversation, compared with and without > How to create and update your own with the skill creator, then hands-on: build and test	60 MIN
2:30 pm	Module 5 Claude Skills (Part 2): Enhance AI Conversation > The REACT checklist: a humaniser Skill that strips the AI slop out of your writing > Six Thinking Hats: Claude as a debate partner that pushes back, not a yes-man > SWOT analysis: Claude explores business opportunities and supports strategic decisions > Hands-on: humanise a real piece of AI writing, then run a live department decision through the six hats	45 MIN
3:15 pm	Afternoon tea break	15 MIN
3:30 pm	Module 6 AI-powered business data analysis: from numbers to insights > The Analysis Ladder: Prepare, Describe, Diagnose, Prescribe > Uploading a spreadsheet and having Claude orient it: columns, periods, gaps > Describe what happened, diagnose why, prescribe what to do next > Charts and an executive summary with recommendations, written for management > Judging the recommendation before acting on it: the human stays in the loop > Hands-on: a 1,000-row business dataset, from raw file to written recommendation	90 MIN
5:00 pm	Day 1 quiz and recap with Q&A A quick quiz on the six modules, a recap through the six pillars, and an open floor.	30 MIN
5:30 pm	End of day one	

Course Outline (Day 2)

TIME	DAY 2 AGENDA	
8:30 am	Registration and networking	30 MIN
9:00 am	Module 7 Claude Projects: Building a persistent workspace > Why every new chat starts at zero, and what that costs a department > Explore a Project's key features: custom instructions, project knowledge and memory > Building a departmental Project: KPIs, SOPs, brand guidelines, custom instructions > Hands-on: configure and test your own workspace on real department material	75 MIN
10:15 am	Morning tea break	15 MIN
10:30 am	Module 8 Claude Cowork: From chat to agentic work > Understand the difference between Claude Chat and Claude Cowork > Learn how Cowork works agentially: planning the steps, acting in your folders and tools, showing its work > Explore the difference between a standalone Cowork session and one run inside a Project > Hands-on: hand Cowork a real multi-step task, agree the plan, review the result	60 MIN
11:30 am	Module 9 Connectors and Scheduled Tasks: Building your own automation > Connectors: Claude reads and acts in your email, calendar, drives and boards > Scheduled tasks: a brief that runs on its own, at a cadence you choose > Deciding what to connect, and where permission should stop > Hands-on: learn to build an automation tool with a Connector and a Scheduler, then set it running	60 MIN
12:30 pm	Lunch	60 MIN
1:30 pm	Module 10 No-code application building > The Ideate, Iterate, Output framework: describe the outcome, never the code > Build no-code apps for business productivity and automation, live in the room > Each build applies what came before: briefs, Skills, data, Projects, Cowork, Connectors > Iterating on a working app in plain language: change a feature, fix a bug, add data > Knowing when an app is ready to run in the real world, and what to check before it does	90 MIN
3:00 pm	Afternoon tea break	10 MIN
3:10 pm	Module 11 Capstone project > A final session to make sure every participant can apply AI to their own real work > Each participant chooses an actual problem from their own department > Solve it in the room with the tools from both days: a brief, a Skill, a Project, an automation or an app > Present the problem, the approach and the result to the room as a management-ready output > Feedback from the trainers and the room, and the one workflow to run first back at work	100 MIN
4:50 pm	Q&A, certification and closing Open floor for anything not yet answered, and participation certificates for everyone who completed both days.	40 MIN
5:30 pm	End of day two	

Talk to us about running it

Tell us your company size, your industry and what your people struggle with, and we will come back with how these two days should run for you.
