

Claude Mastery for Business Productivity and Automation

DURATION**2 full days**

8:30am to 5:30pm

STRUCTURE**11 modules**

Theory + practical

TECHNICAL LEVEL**No coding**

Laptops required

LEARNING OUTCOMES

Six jobs. What every participant can do by 5:30pm on day two

Read

A long report, contract or policy in; the parts that matter, the risks buried in it and the questions worth asking next, out.

Analyse

Take a spreadsheet through to a written review with charts and recommendations, and know which numbers the argument rests on.

Think

Pressure-test a real decision from six perspectives, and argue back when the answer is wrong.

Underneath all six: knowing what should never go into a chat, how to verify what comes out, and where the limits sit. Taught on day one, before anyone uploads anything.

Write

Brief AI properly and get a proposal, report or difficult email back at a standard they would put in front of a manager.

Automate

Load their department's context once, teach AI their procedures as reusable Skills, and stop re-explaining themselves every Monday.

Build

Produce dashboards, calculators and small working applications without writing a line of code.

WHAT THEY LEAVE WITH

A finished work deliverable

A configured departmental Project

Two reusable Skills

An interactive dashboard

A six-perspective decision document

Three working no-code tools

A 30-day deployment plan

The Team Cascade Kit

Eleven modules across the two days

DAY ONE · MASTER THE CONVERSATION

01	Introduction to AI and Claude for productivity	70
02	Effective AI communication	110
03	AI governance, data security and responsible use	40
04	AI-powered business data analysis	65
05	Applied AI: individual business problem solving	150

DAY TWO · MASTER THE SYSTEM

06	Projects: building a persistent workspace	75
07	Skills: reusable procedures for recurring work	75
08	Artifacts: interactive dashboards and reports	50
09	Decision frameworks: Six Thinking Hats	45
10	No-code application building	80
11	Capstone and deployment planning	70

THE FRAME

Six jobs, taught in this order

Read	Write	Analyse	Automate	Think	Build
Long documents and market material, pulled apart.	Proposals, reports and difficult emails.	Revenue, costs and patterns in your own numbers.	Context loaded once, procedures taught, no re-explaining.	Pressure-test a decision before you commit.	Dashboards and internal tools, with no code.

DAY ONE Master the conversation

Modules 1–5

"I can get exactly what I need out of AI, every time, in a single conversation."

By 5:30pm every participant can open a blank chat, write a proper brief and finish a deliverable in one sitting — and has felt the friction of re-explaining their job every time, which is deliberate, and is what day two fixes.

01	Introduction to AI and Claude for productivity	70 MIN
Where generative AI helps a business, what to understand about models, tokens and context, and the Blueprint 6 frame the two days map to.		
02	Effective AI communication	110 MIN
The five ingredients of a brief that works first time — Role, Context, Task, Format, Constraint — practised across three business scenarios and then used on real performance data.		
03	AI governance, data security and responsible use	40 MIN
A classification framework for deciding what information is safe to share, how to spot a data-harvesting tool, and the Responsible AI checklist: verification, bias awareness, human oversight.		
04	AI-powered business data analysis: from numbers to insights	65 MIN
The Analysis Ladder — Prepare, Describe, Diagnose, Prescribe — taken from a raw spreadsheet through to an executive summary with recommendations.		
05	Applied AI: individual business problem solving	150 MIN
An open session where everyone takes a task from their current workload through to a finished deliverable and presents it, closing with an overnight departmental audit.		

"I never start from scratch again, and neither does my team."

Welcome back and overnight debrief

45 MIN

Each department shares what its audit found, and the room prioritises the opportunities worth doing first.

06 Projects: building a persistent workspace

75 MIN

Each participant builds a departmental Project loaded with its KPIs, SOPs and brand guidelines, adds Connectors where they earn their place, and meets Claude Cowork as the shared team surface beside it.

07 Skills: reusable procedures for recurring work

75 MIN

Moving from ad-hoc outputs to standardised procedures: each participant builds and validates two reusable Skills for their workspace.

08 Artifacts: interactive dashboards and reports

50 MIN

Building an interactive dashboard as an Artifact, from a first visualisation through to filters, alerts and a KPI scorecard.

09 Decision frameworks: Six Thinking Hats with Claude

45 MIN

Claude as a debate partner, through Six Thinking Hats, run by the whole room together in Cowork, on a decision each participant is facing now — every claim required to cite a number.

10 No-code application building

80 MIN

Three working builds through Ideate, Iterate, Output: a task board, a document personalisation tool, and a weekly planner that shows where the week actually goes.

11 Capstone project and strategic deployment planning

70 MIN

Each participant presents their strongest deliverable, then leaves with a 30-day deployment plan, an ROI figure in hours returned per week, and the Team Cascade Kit for training their own team.

Taught by people who have shipped this in production

Most AI training is delivered by professional trainers. Both of ours built AI systems inside companies first. **Tey Jian Han** built AI agents at EY. **Daniel Chua** built machine learning models at MoneyLion, a US-listed fintech, then internal AI systems at a global crypto exchange firm, where he also trained the staff who used them.

It shows up most in the sessions about what not to do: where AI invents things under pressure, what it costs at volume, and which processes should never be automated. Module 3 is taught by people who have watched it happen.

Talk to us about running it

Tell us your company size, your industry and what your people struggle with, and we will come back with how these two days should run for you.
